

VeriShot[™] Single Valve Gate System

Patent Pending

Assembly Overview

IMPORTANT!!

Mould plate cooling is critical for the correct operation of the VeriShot™ single valve gate

The cylinder should be in the closed position at all times except during injection and packing

Air quality: Filtered to 40 µM and lubricated

Recommended air pressure: 6-8 Bar

Maximum air pressure: 10 Bar

**Key Features**

- Suitable for most materials – temperature control in gate area is critical for gate quality
- Tapered or parallel type shut off pin
- Ø2.5mm to Ø5.0mm pin
- Pneumatic actuation
- Metric or inch locating ring option
- Compatible with TX16, TX19 and TX27 FlowLoc™ nozzles. See FlowLoc™ Technical Guide.

Overall Dimensions

Nozzle Compatibility

Description	FlowLoc™ Nozzle	Tip	Standard Pin Size (D x L)	L (nozzle)
VeriShot™ 16	TX16	OV/ TV	Ø2.5 x 300	75-250
VeriShot™ 19	TX19		Ø3.0 x 400	75-300
VeriShot™ 27	TX27		Ø5.0 x 600	75-450

→ Refer to page VSTG-7 Pin Details section to calculate required pin length

Product Codes	
Part Number	Description
91-121-019	VeriShot™ SVG Semi Assembled Metric 19 - Uncut Pin
91-121-027	VeriShot™ SVG Semi Assembled Metric 27 - Uncut Pin
91-121-119	VeriShot™ SVG Fully Assembled Metric 19 - Parallel Pin
91-121-127	VeriShot™ SVG Fully Assembled Metric 27 - Parallel Pin
91-121-219	VeriShot™ SVG Fully Assembled Metric 19 - Tapered Pin
91-121-227	VeriShot™ SVG Fully Assembled Metric 27 - Tapered Pin
91-122-019	VeriShot™ SVG Semi Assembled Inch 19 - Uncut Pin
91-122-027	VeriShot™ SVG Semi Assembled Inch 27 - Uncut Pin
91-122-119	VeriShot™ SVG Fully Assembled Inch 19 - Parallel Pin
91-122-127	VeriShot™ SVG Fully Assembled Inch 27 - Parallel Pin
91-122-219	VeriShot™ SVG Fully Assembled Inch 19 - Tapered Pin
91-122-227	VeriShot™ SVG Fully Assembled Inch 27 - Tapered Pin

VeriShot™ is available in two configurations:

1. Fully assembled:

- Valve pin cut to length and profiled by Mastip
- FlowLoc™ Nozzle fastened to VeriShot™ manifold
- System tested to check air actuation
- Ready to be installed into mould
- Nozzle code must be specified when placing order. See FlowLoc™ Technical Guide

2. Semi assembled:

- Valve Pin to be cut to length and profiled by customer
- FlowLoc™ Nozzle fastened to VeriShot™ manifold
- O-rings and wear strips to be fitted to piston and greased with supplied silicone lubricant
- Remaining parts to be fitted to Semi-Assembled unit
- See technical guide to complete assembly
- Nozzle code must be specified when placing order. See FlowLoc™ Technical Guide

Note

- For FlowLoc™ heater, flexible and non-flexible section lengths see the FlowLoc™ technical guide.
- Multiple diameter locator ring sizes now come as standard to suit your requirements

Mould Pocket

$$E = L \times 0.0000125 \times (\text{nozzle temp. } ^\circ\text{C} - \text{mould temp. } ^\circ\text{C})$$

Key		Øxx.x	
○	Ø6mm Air Line	TX19	36mm
●	Ø6mm Cooling Channel	TX27	43mm

Note

1. Mould plate cooling is critical for the correct operation of the VeriShot™ Single Valve Gate. Cooling channels enable heat to be drawn away from the unit maintaining the integrity of the seals.
2. Airlines can be routed to the cavity plate (lower plate) to simplify drilled channels. Cooling channels can then be placed on one level at 11mm.
3. See FlowLoc™ technical guide for the gate details dependant on nut style selection.

VeriShot™ Components

FlowLoc™ Nozzle Components

Valve Pin Length

Caution: The length of the valve pin is critical to achieve a quality gate vestige. Use the calculation below if you are responsible for cutting to length and profiling. If ordering a fully assembled unit Mastip will supply the valve pin cut to length and profiled.

To calculate final pin length use the following equation:

$$\text{Valve Pin Length (TX27)} = 78.50 + L (\text{nozzle}) + 0.1$$

$$\text{Valve Pin Length (TX19)} = 78.25 + L (\text{nozzle}) + 0.1$$

L (nozzle) - See FlowLoc™ Technical Guide.

TX19 FlowLoc™ Nozzle

TX27 FlowLoc™ Nozzle

Taper Valve Gate

The pin end is shaped to prevent damage to the leading edge and subsequent flashing around the gate.
The pin will form a 0.1mm deep recess on the part.

Description	D	d1	d2	AF	CP	AT	qT	HT
VeriShot™ 3.0 x 250	3.0	2.2	2.15	2.75	8	2.2	1.2	2.5
VeriShot™ 5.0 x 350	5.0	3.5	3.45	4.65	10	3.5	2.0	3.0

Parallel Valve Gate

Description	D	AP	BP	AF	CP	GP	qP	HP
VeriShot™ 3.0 x 250	3.0	2.192	2.0	2.75	8	2.205	0.8	2.5
VeriShot™ 5.0 x 350	5.0	3.492	2.5	4.65	10	3.505	1.3	3.0

Installation

ONE

Secure **Lower Manifold 27** using the flats on a vice. Apply a small amount of the supplied heat resistant nickel grease on the thread of the **Body 31**. Tighten the Flowloc™ Nozzle to the relevant torque setting according to the nozzle series. See table:

- X19 – 180 Nm
- X27 – 220 Nm

TWO

Insert the **Tip 37** into the **Body 31**. Apply a small amount of the supplied heat resistant nickel grease on the tread of the **Nut 38** and place over the **Tip 37**. Tighten the **Nut 38** to the relevant torque setting according to the nozzle series:

- X19 – 25 Nm
- X27 – 30 Nm

THREE

Fit 2 x **Dowel Pin Ø5 x 28 25** and **Dowel Pin Ø3 x 12 28** to the **Lower Manifold 27**. Clean any residual material from the valve pin seal pocket in the **Lower Manifold 27**. Apply a small amount of the supplied heat resistant nickel grease to the thread of the **Valve Pin Seal 26** and screw into the **Lower Manifold 27**. Tighten to 20Nm torque.

FOUR

Insert the **Thermocouple 29** into the hole in the **Lower Manifold 27**. Ensure the **Thermocouple 29** is pushed to the bottom of the hole and then bend downwards into the slot.

INSTALLATION CONT.....

FIVE

Fit the VeriShot™ Heater **24** to the Lower Manifold **27** securing the Thermocouple **29**. Ensure the slot in the VeriShot™ Heater **24** is aligned with the Dowel Pin $\varnothing 3 \times 12$ **28** for the correct positioning.

SIX

Fit the Valve Pin Adjustment Packers **9b**, **9c** and **9d** onto the Valve Pin **10**. Ensure the correct packer thickness is in the correct position. (Recommend starting with the thinnest packer above the pin head, then adjust to suit if necessary). Fit the Valve Pin **10** to Piston **13**. Fit the remaining Valve Pin Adjustment Packer **9a** above the pin head. Secure the Piston **13** in a vice holding across flats. Screw the Pin Locking Screw **8** into the Piston **13** and tighten to 40Nm torque. Ensure the Valve Pin **10** is able to float to align with the Valve Pin Seal **26**.

SEVEN

Fit Wear Strip Top **11** and O-Ring ID 79 x 3 **12** to the top of the Piston **13**. Fit O-Ring ID 100 x 3 **14** and Wear Strip Bottom **15** to the base of the Piston **13**. Fit O-Ring ID 79 x 3 **16** to the internal groove in the Piston **13**.

EIGHT

Apply a generous amount of supplied silicone grease on all O-Rings and the Wear Strips. Insert the Piston **13** into the Cylinder **20**. Apply gentle pressure to the Piston **13** to compress the seals so the Piston **13** slides into the Cylinder **20**. Ensure the Piston **13** is pushed fully forward.

INSTALLATION CONT.....

NINE

Place the **Cylinder (20)** and **Piston (13)** assembly over the **VeriShot™ Heater (24)**. Ensure the **Valve Pin (10)** enters the **Valve Pin Seal (26)**. Fit the **Cylinder (20)** to the **Lower Manifold (27)** shoulder. Ensure the flat on **Cylinder (20)** is aligned with **VeriShot™ Heater (24)** wiring. The **Piston (13)** may need to be rotated to slot into the **VeriShot™ Heater (24)**.

TEN

Retain the **Cylinder (20)** to the **Lower Manifold (27)** shoulder with the 4x **Button Cap Screws M4 x 8 (23)**.

ELEVEN

Fit the **Upper Manifold (7)** into the **VeriShot™ Heater (24)** and slide down locating it with the 2x **Dowel Pin Ø5 x 28 (25)** installed in the **Lower Manifold (27)**. Ensure mating surfaces are clean between the **Lower Manifold (27)** and **Upper Manifold (7)**. Fit 2x **Dowel Pin Ø5 x 28 (6)** to the upper surface of the **Upper Manifold (7)**. Fit 3x **Dowel Pin Ø6 x 20 (17)** to the **Cylinder (20)**.

TWELVE

Fit and locate the **Striker Plate (5)** with the required radius machined to the **Upper Manifold (7)** with the use of the 2x **Dowel Pin Ø5 x 28 (6)**. The **VeriShot™ Heater (24)** must fit into the groove in the **Striker Plate (5)**. Ensure mating surfaces are clean between the **Upper Manifold (7)** and the **Striker Plate (5)**. Apply a small amount of the supplied heat resistant nickel grease to the thread of the 4x **Cap Screw M8 x 90 (4)** and install. Tighten to 30Nm torque.

INSTALLATION CONT.....

THIRTEEN

Fit O-Ring ID 115 x 3 **18** and O-Ring ID 5 x 1.5 **19** to the Cylinder **20**.

FOURTEEN

Fit the Locating Ring **1** over the VeriShot™ Heater **24**. Ensure the air way in the Locating Ring **1** is aligned with the O-Ring ID 5 x 1.5 **19** in the Cylinder **20**. Press and locate the Locating Ring **1** onto the Cylinder **20** with the 3x Dowel Pin $\varnothing 6$ x 20 **17**.

FIFTEEN

Fasten the Locating Ring **1** and the Cylinder **20** together by using the 4x Cap Screw M5 x 40 **21**. Fit the 2x O-Ring ID 6 x 1.5 **22** to the Cylinder **20**. Place silicon grease on the O-Rings to prevent them falling out.

INSTALLATION CONT.....

SIXTEEN

Fit the FlowLoc™ Heater 32 to the Body 31 and orientate the wiring to suit the VeriShot™ Heater 24 wiring direction. Insert the Thermocouple 33 into the hole in the Body 31. Ensure the Thermocouple 33 is pushed to the bottom of the hole and then bend downwards against the FlowLoc™ Heater 32. Retain the Thermocouple 33 with the Thermocouple Clip 34. Secure the Thermocouple 33 by positioning the Heater Cap 35 onto the step of the Body 31. Fit the Circlip 36 to retain the Heater Cap 35. Align the Thermocouple 33 wire.

SEVENTEEN

Bend the FlowLoc™ Heater 32 wiring down to enter the wiring slot in the mould plate. Align the slot in the Locating Ring 1 with the Dowel Pin $\varnothing 6 \times 20$ 3 and fit the assembled VeriShot™ System into the mould plate. Secure the assembled VeriShot™ System with 6x Cap Screws M6 (metric option) or 6 x Cap Screws 1/4 UNC (inch option) 2.

INSTALLATION CONT.....

EIGHTEEN

Bend the wiring up to fit into the wiring channel in the mould plate.

Valve Pin Height Adjustment

ONE

If polymer has been processed through the VeriShot™ single valve gate heat up both the VeriShot™ Heater 24 and the FlowLoc™ Heater 32 to a suitable temperature to soften the polymer in the flow channels. Remove the Striker Plate 5 using the M6 tapped hole.

TWO

Remove the Upper Manifold 7 using the M10 tapped hole.

THREE

Place the supplied Locking Screw Removal Jig A into position and tightened with the supplied M8 Cap Screws B. This is to prevent the Piston 13 from turning when undoing the Pin Locking Screw 8 and potentially damaging the VeriShot™ Heater 24 wires.

FOUR

Remove the Pin Locking Screw 8. Remove the Valve Pin Adjustment Packer 9a. Remove the Valve Pin 10. Remove the remaining Valve Pin Adjustment Packers 9b, 9c and 9d.

VALVE PIN HEIGHT ADJUSTMENT CONT....

FIVE

Minor Adjustment

Swap **Valve Pin Adjustment Packers** to achieve small pin adjustments (different packer = different height).

FlowLoc™ 27 Series Nozzle		Drawing Reference	FlowLoc™ 19 Series Nozzle	
Thickness (mm)	Serial Number		Thickness (mm)	Serial Number
2.00	60-062-420	1	2.25	60-062-222
2.10	60-062-421	2	2.35	60-062-223
2.20	60-062-422	3	2.45	60-062-224
2.30	60-062-423	4	2.55	60-062-225

SIX

Major Adjustment

Move one or more **Valve Pin Adjustment Packers** from below the pin head to above the pin head to achieve large pin adjustment.

VALVE PIN HEIGHT ADJUSTMENT CONT....

SEVEN

Assemble the **Valve Pin Adjustment Packers** (9) x3 to suit pin height adjustment onto the **Valve Pin** (10). Insert the **Valve Pin** (10) assembly into the **Piston** (13). Ensure the **Valve Pin** (10) is matched to the **Valve Pin Seal** (26). Add the remaining **Valve Pin Adjustment Packer** (9) x1 on top of the **Valve Pin** (10) and tighten the **Pin Locking Screw** (8) to 40Nm.

EIGHT

Remove the **M8 Cap Screws** (B) and **Locking Screw Removal Jig** (A).

NINE

Fit the **Upper Manifold** (7). Ensure mating surfaces are clean between the **Upper Manifold** (7) and **Lower Manifold** (27).

TEN

Fit the **Striker Plate** (5) and tighten the **Cap Screws M8 x 90** (4) to 30Nm torque.
