

Installation an MX09 Nozzle in a front-loading configuration**ONE**

Fit the dowels into the mould plate.

Fit the nozzle assemblies into the cavity plate.

Check that all nozzles are level within 0.01mm.

TWO

Slide the heaters onto the nozzles.

Thread the wires through the wire channels in the cavity plate.

INSTALLATION CONT.....

THREE

Fit the snap ring.

FOUR

Fasten the wires in the cavity plate wire channel.

REPLACING THE HEATER

ONE

Remove the snap ring.

TWO

Remove the Heater.

* To reinstall the heater, follow steps 1 and 2 in reverse order.

REPLACING THE TIP AND NUT

ONE

Use a AF8mm socket to unscrew the nut from the body and remove nut and snap ring.

TWO

Remove tip from the body.

1. Clean any plastic & debris from the tip pocket in the nozzle body.
2. Replace with new tip.
3. Apply a small amount of heat resistant nickel grease to the thread of new nut.
4. Screw the new nut into the body with snap ring and torque to 10Nm.
5. Check that the tip height is correct.

THERMOCOUPLE REPLACEMENT

ONE

Remove the snap ring.

TWO

Remove the Heater.

Remove thermocouple from thermocouple groove.

REPLACING CONT.....

THREE

Pre-bend front of replacement thermocouple with jig (38-010-003).

FOUR

Place front bend through thermocouple hole.

REPLACING CONT.....

FIVE

Line up with internal slot.

SIX

Slide heater over a nozzle body if available or use a rod with a diameter of 9.37mm with a tolerance of ± 0.02 to hold thermocouple front bend in place in the internal slot.

REPLACING CONT.....

SEVEN

Follow thermocouple groove and gently press replacement thermocouple into place, with flat tool preferably made of brass, that is wider than the groove.
