Replacing the Thermocouple on an X Range Nozzle

If the BX or MX nozzle is in a rear-loading configuration, you must dismantle the hot runner system to service the nozzle and then re-assemble the system. You must remove the SX nozzle from the mould. If the MX nozzle is in a Hot Half, you only need to remove the cavity plate to access nozzle tip to replace the thermocouple.

Follow these steps to replace a thermocouple from an X Range nozzle:

**ONE**

Gently remove the **T/C** from the thermocouple hole in the **nozzle head**.

Remove the **snap ring** then remove the **heater cap** and lastly remove the **T/C clip**.

**TWO**

Insert the new **T/C** into the **T/C slot** and bend it over the **Heater** as shown. Thread the **T/C wires** through the **wire channels**.

**THREE**

First slip on the **T/C clip** then insert the **heater cap** onto the heater, taking care to align the groove in the cap with the thermocouple. Lastly re-install the **snap ring**. Press the **snap ring** down firmly to ensure it is seated correctly.
